Because of an error in production, the last paragraph on page R6255 was printed incorrectly. It should read as follows:

In Figs. 3(a) and 3(b), we show one example of outer l - g bifurcation for map (2). Before bifurcation in Fig. 3(a) ($l=1.3$, $p=-2$, and $d_1=d_2=0.674$), the basins of attractors $A^{(+)}$ and $A^{(-)}$ are locally riddled. The boundary crisis between the immediate basin of attraction $\bar{\beta}(A^{(+)})$ and the absorbing area is indicated in Fig. 3(a). After a bifurcation in Fig. 3(b) ($l=1.3$, $p=-2$ and $d_1=d_2=0.725$), these basins are globally riddled by each other.
